Summary of Grain Depth and Structure for Premium Woodgrains TFLs
Premium Woodgrains TFLs are part of Egger's Feelwood range, characterised by a deeper and more pronounced grain structure compared to standard TFLs. To manage this depth and prevent damage to the decorative paper, Feelwood decors incorporate additional barrier layers. This construction enhances impact resistance, bending strength, and durability.

What makes the Feelwood Premium Woodgrains TFL different?
The deeper texture in Feelwood decors is synchronised with the visual pattern, creating a highly realistic wood effect. This design also results in a slight thickness increase of approximately 0.6". These features distinguish Feelwood products from standard TFLs, offering superior durability and enhanced aesthetic appeal as a unique selling point. Due to the more pronounced grain structure, Premium Woodgrains TFLs may not be ideal where a smoother finish is equired. Samples can be ordered through our GroupPortal or by contacting customer service.
